## 1. General information

## 1.1. EUT description

<b>Equipment under test</b>	Wifi Module
Model name	WizFi250
Serial number	N/A
Frequency range	2 412 MHz ~ 2 462 MHz (802.11 b/g/n_HT20)
Modulation technique	DSSS, OFDM
Number of channels	11(802.11 b/g/n_HT20)
Antenna type & gain	UFL type PCB antenna // 2.50 dBi
	PCB antenna // 4.15 dBi
Power source	DC 3.3 V

## 1.2. Test frequency

- 802.11b/g/n HT20

	Low channel	Middle channel	High channel
Frequency (Mb)	2 412	2 442	2 462

## 1.3. Information about derivative model

N/A

### 1.4. Device modifications

N/A

## 1.5 Device information

- The device have two type antenna. When it use a UFL type PCB antenna, PCB Antenna does not operating, and vice versa.
- The device does not transmit simultaneously for UFL type PCB antenna and PCB antenna.
- The device duty cycle  $\geq$  98 percent

C-3701, Simin-daero 365-401, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (5) of (72)

## 1.6. Test facility

C-3701, Simin-daero 365-40, Dongan-gu, Anyang-si, Gyeonggi-do,431-716, Korea 473-29, Gayeo-ro, Yeoju-si, Gyeonggi-do, Korea

The open area test site is constructed in conformance with the requirements ANSI C63.4-2003/2009.

## 1.7. Laboratory accreditations and listings

Country	Agency	Scope of accreditation	Certificate No.
USA	FCC	3 & 10 meter Open Area Test Sites and one conducted site to perform FCC Part 15/18 measurements.	343818
KOREA	KC	EMI (10 meter Open Area Test Site and two conducted sites) Radio (3 & 10 meter Open Area Test Sites and one conducted site)	KR0100
CANADA	IC	3 & 10 meter Open Area Test Sites and one conducted site	4769B-1

C-3701, Simin-daero 365-401, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (6) of (72)

## 2. Summary of tests

Reference	Parameter	Test results
15.247(a)(2)	6 dB bandwidth	Pass
15.247(b)(3)	Output power	Pass
15.247(e)	Power spectral density	Pass
15.205, 15.209, 15.207(d)	Radiated spurious emission and conducted spurious emission	Pass
15.207	AC conducted emissions	Pass

## Test procedures;

The measurement procedures described in the American National Standard for Methods of Measurement of Radio-Noise Emission from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz (ANSI C63.4-2003/2009) and the guidance provided in KDB 558074\_v03r01 were used in the measurement of the EUT.

C-3701, Simin-daero 365-401, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (7) of (72)

## Pre-scanned maximum output power

Preliminary tests were performed in different data rate as below table and the highest power data rates(802.11b, 802.11g, 802.11n\_HT20) were chosen for full test in the following section to demonstrate compliance to the FCC limit line.

- UFL type PCB antenna

•		Conducted power(dB m)						
Test mode	Detector mode	Data rate(Mbps)						
		1	2	5.5	11			
802.11b	Peak	14.39	14.54	<u>14.67</u>	14.65			
(Low channel)	Average	11.55	11.72	12.05	11.89			

			Conducted power(dB m)						
Test mode	Detector mode	Data rate(Mbps)							
		6	9	12	18	24	36	48	54
802.11g	Peak	<u>19.32</u>	19.15	18.75	19.23	19.20	18.86	18.85	17.88
(Low channel)	Average	<u>11.19</u>	11.04	10.84	10.99	11.05	11.06	10.99	10.23

Test mode			Conducted power(dB m)						
	Detector mode	Data rate(Mbps)							
		MCS0	MCS1	MCS2	MCS3	MCS4	MCS5	MCS6	MCS7

## 3. Test results

## 3.1 Radiated spurious emissions

## **Test setup**

The diagram below shows the test setup that is utilized to make the measurements for emission from 9 kHz to 30 MHz Emissions.

The diagram below shows the test setup that is utilized to make the measurements for emission from 30 Mz to 1 Gz emissions.

C-3701, Simin-daero 365-40l, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (10) of (72)

## **Test procedure**

Radiated emissions from the EUT were measured according to the dictates in section 11.0 & 12.0 of KDB  $558074 \ v03r01$ 

- 1. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter anechoic chamber test site or open area test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- 2. During performing radiated emission below 10 kg, the EUT was set 3 meters away from the interference receiving antenna, which was mounted on the top of a variable height antenna tower. During performing radiated emission above 1 0 kg, the EUT was set 3 meter away from the interference receiving antenna.
- 3. The antenna is a broadband antenna, and its height is varied from 1 meter to 4 meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- 4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the table was turned from 0 degrees to 360 degrees to find the maximum reading.
- 5. The test receiver system was set to peak detect function and specified bandwidth with maximum hold mode.
- 6. If the emission level of the EUT in peak mode was 10 dBlower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have10 dB margin would be retested one by one using peak,quasi-peak or average method as specified and then reported in a data sheet

C-3701, Simin-daero 365-40l, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (11) of (72)

#### Note.

All data rates and modes were investigated for radiated spurious emissions. Only the radiated emissions of the configuration that produced the worst case emissions are reported in this section.

- 1. Unwanted emissions into non-restricted frequency bands
  - The reference level measurement refer to section 11.1

Set analyzer center frequency to DTS channel center frequency,

Set SPAN to  $\geq 1.5$  times the DTS channel bandwidth,

Set RBW=100 kHz,

Set VBW  $\geq 3 \times RBW$ ,

Set detector = peak,

Set sweep time = auto couple,

Trace = max hold

- Unwanted emissions level measurement refer to section 11.2

Set the center frequency and span to encompass frequency range to be measured,

Set RBW=100kHz,

Set VBW  $\geq 3 \times RBW$ ,

Set detector = peak,

Ensure that the number of measurement points  $\geq$  span / RBW,

Set sweep time = auto couple,

Trace = max hold

- 2. Unwanted emissions into restricted frequency bands
  - Peak power measurement procedure refer to section 12.2.4

Set RBW=1Mb,

Set VBW  $\geq 3 \times RBW$ ,

Set SPAN  $\geq$  RBW,

Set detector = Peak,

Set sweep time = auto,

Trace = max hold

-Average power measurements procedure refer to section 12.2.5.1

The EUT shall be configured to operate at the maximum achievable duty cycle.

Set RBW = 1 M $^{\circ}$ L,

Set  $VBW > 3 \times RBW$ .

Set detector = RMS, if span/(# of points in sweep)  $\leq$  (RBW/2).

Satisfying this condition may require increasing the number of points in the sweep or reducing the span. If this condition cannot be satisfied then the detector mode shall be set to peak, Averaging type = power (i.e.,RMS).

- 1) As an alternative the detector and averaging type may be set for linear voltage averaging.
- 2) Some instruments require linear display mode in order to use linear voltage averaging. Log or dB Averaging shall not be used. Sweep time = auto, perform a trace average of at least 100 traces. Sweep time = auto, perform a trace average of at least 100 traces.
- 3. To get a maximum emission level from the EUT, the EUT is manipulated through three orthogonal planes.

C-3701, Simin-daero 365-401, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (12) of (72)

#### Limit

According to 15.209(a), for an intentional radiator devices, the general required of field strength of radiated emissions from unintentional radiators at a distance of 3 meters shall not exceed the following values:

Frequency (Mb)	Distance (Meters)	Radiated (µV/m)
0.009 ~ 0.490	300	2 400 / F(kHz)
0.490 ~ 1.705	30	24 000 / F(kllz)
1.705 ~ 30.0	30	30
30 ~ 88	3	100**
88 ~ 216	3	150**
216 ~ 960	3	200**
Above 960	3	500

<sup>\*\*</sup>Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands  $54 \sim 72\,$  Mb,  $76 \sim 88\,$  Mb,  $174 \sim 216\,$  Mb or  $470 \sim 806\,$  Mb. However, operation within these frequency bands is permitted under other sections of this Part, e.g., Sections  $15.231\,$  and  $15.241.\,$ 

C-3701, Simin-daero 365-40l, Dongan-gu, Anyang-si, Gyeonggi-do, 431-716, Korea Tel: +82-31-425-6200 / Fax: +82-31-424-0450 www.kes.co.kr Test report No.: KES-RF-13T0004 Page (13) of (72)

## - UFL type PCB antenna

## Test results (Below 30 Mz) - Worst case configuration: 802.11g

The frequency spectrum from 9 kHz to 30 MHz was investigated. Emission levels are not reported much lower than the limits by over 20 dB.

Radiated	emissions	Ant.	Co	orrection facto	rs	Total	Liı	mit
Frequency (MHz)	Reading (dBµV)	Pol.	Ant. factor (dB/m)	Cable loss (dB)	F <sub>d</sub> (dB)	Actual (dBµV/m)	Limit (dBµV/m)	Margin (dB)
	Not detected for above 30 Mbz							

#### Note.

- 1. All spurious emission at channels are almost the same below 30 Mz, so that <u>low channel</u> was chosen at representative in final test.
- 2. Actual = Reading + Ant. factor + Cable loss +  $F_d$
- 3.  $F_d = 40 \log(D_m / D_s)$

Where:

 $F_d$  = Distance factor in dB

 $D_m$  = Measurement distance in meters

 $D_s$  = Specification distance in meters

## Test results (Below 1 000 Mz) – Worst case configuration: 802.11g

The frequency spectrum from 30 Mz to 1 000 Mz was investigated. Emission levels are not reported much lower than the limits by over 20 dB.

Radiated	emissions	Ant.	Correction	on factors	Total	Li	mit
Frequency (MEz)	Reading (dBµV)	Pol.	Ant. factor (dB/m)	Cable loss (dB)	Actual (dBµV/m)	Limit (dBµV/m)	Margin (dB)
60.98	16.19	V	11.81	0.73	28.73	40.00	11.27

# 3.2 Conducted spurious emissions

Test setup	_		_	
EUT		Attenuator		Spectrum analyzer

### **Test procedure**

All data rates and modes were investigated for conducted spurious emissions. Only the conducted emissions of the configuration that produced the worst case emissions are reported in this section.

Per the guidance of KDB 558074\_v03r01, section 11.1&11.2, the reference level for out of band emissions is established from the plots of this section since the band edge emissions are measured with a RBW of 100 kHz. This reference level is then used as the limit in subsequent plots for out of band spurious emissions shown in section 2.4.3. The limit for out of band spurious emission at the band edge is 20dB below the fundamental emission level measured in a 100 kHz bandwidth.

#### Limit

According to 15.247(d), in any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph(b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in section 15.209(a) is not required. In addition, radiated emission which in the restricted band, as define in section 15.205(a), must also comply the radiated emission limits specified in section 15.209(a) (see section 15.205(c))
